DETAILED ACTION

Response to Amendment

1. This communication is in response to the applicant's amendment filed 11/1/00.
2. Claims 142-144, 146-148, 150, 152-157 and 161-163, 165-167, 169, 171-176 have been amended per request and claims 139-141 and 158-160 have been canceled. Claims 9-33, 89-138, 142-157 and 161-176 are under consideration.

Allowable Subject Matter

3. Claims 9-33, 89-138, 142-157 and 161-176 are allowed.

The following is an examiner's statement of reasons for allowance:

The claimed inventions pertain to a method or apparatus for controlling the initiation and duration of overtime intervals in an electronic auction. The following are the most relevant exemplary references pertinent to the claimed inventions:

Fisher et al. (US Pat. 5,835,896) teaches a method and system for processing and transmitting electronic auction information. Fisher et al. fail to address the problem of controlling initiation and duration of overtime intervals.

Walker et al. (US Pat. 5,794,207) teaches a bilateral buyer-driven auction. Walker et al. do not teach or suggest a method of controlling initiation and duration of overtime intervals..

Odom et al. (US Pat. 6,058, 379) teaches a method of electronic exchange of goods and services via an electronic network. Odom et al. fail to teach or suggest control of overtime intervals.

Art Unit: 2164

Sairamesh et al (“Economic Framework for pricing and Charging Digital Libraries”, D-Lib Magazine, February 1996) teaches that prices and services are offered various time-intervals comprising different opening time and closing times. It fails to teach specific mechanisms for controlling overtime intervals.

“SOLD! ... TO THE LOWEST BIDDER, Computer Finance, v6, n2, July 1995. This article teaches a method of conducting an online auction between a buyer and a plurality of potential sellers (suppliers) in a format known as RATS (Reverse Auction Tendering System), however it does not teach or suggest a method of controlling overtime intervals.

Reasons for Allowance

4. Claims 9-33, 89-138, 142-157 and 161-176 are allowed because the identified most relevant prior art of record fails to teach or suggest a method, a machine readable medium or a system of controlling overtime intervals in an electronic auction having multiple lots which comprises the unique feature recited in the respective claims as listed below:

--offering a plurality of lots by a buyer to a plurality of potential sellers and defining an overtime extension parameter for each of the plurality of lots based upon the characteristics of one or more items in the lot (claims 9-12, 89-92 and 93-96),

--extending the closing time for a lot by a predetermined time interval if a received bid for the lot satisfies at least one behind-market bid lot extension criteria (claims 13-33 and 97-138),

--defining a first time interval, a second time interval, a first overtime condition and a first closing time for a first lot :

Art Unit: 2164

-wherein the first time interval is an overtime trigger interval representing a time interval during which an overtime condition can cause extension of a closing time (claims 142,161),

-wherein the second time interval is an overtime extension interval representing a time interval to extend the first time interval (claims 143,162),

-wherein the overtime condition comprises receiving a plurality of bids and assigning an ordinal rank to each bid from a best bid to a worst bid and receiving a bid having an ordinal rank that is within a predefined number of rank ordinal position (claims 144, 145,163 and 164),

wherein the overtime condition comprises receiving a plurality of bids and ordering each bid from a best bid price to a worst bid price and receiving a bid having a bid price within a predefined price of the best bid price (claims 146, 165) or other than the best bid price (claims 157,176),

wherein the overtime condition comprises receiving a plurality of bids and ordering each bid from a best bid price to a worst bid price and receiving a bid having a bid price within a predefined percentage of the best bid price (claims 147,166),

wherein the overtime condition comprises receiving a bid from a predefined bidder (claims 148, 149,167 and 168),

wherein the overtime condition comprises receiving a first set of bids and determining first frequency for the first set of bids (claims 150, 151, 169 and 170),

Art Unit: 2164

wherein the overtime condition comprises generating a statistical analysis parameter for the received bid(s) and matching the statistical analysis parameter with a predefined statistical analysis parameter (claims 152, 153, 171 and 172),.

modifying at least one of the first time interval, second time interval and first overtime condition to extend the first closing time (claims 154, 173),

defining a third time interval, a fourth time interval, a second overtime condition and a second closing time for a second lot (claims 155, 174),

wherein first lot comprises of a custom industrial product or material and the overtime condition is defined in accordance with custom industrial product or material (claims 156, 175).
